Teelixir Consciously Sources The Best Sustainable, Organic, And Wildcrafted Foods!

Teelixir products are created and shared with love and integrity. We do not compromise our values to source only the highest quality ingredients available. All of our raw herbal material is extracted using water only and contain *NO* fillers, excipients or any GMO derived ingredients. Our herbs are sourced organically whenever possible or are from wildcrafted herb collectors. If organic certification or wildcrafted material is not possible, we source our material only from suppliers that do not use any sort of synthetic chemicals (insecticides, herbicides, larvicides, miticides, synthetic / petroleum based fertilizer, etc) during their cultivation and harvesting processes.

Not all medicinal mushroom products are created equal.

There are a number of very important factors we take into consideration when sourcing, extracting, and working with medicinal mushrooms to ensure we supply the highest quality, and medicinally potent herbal ingredients for all our blends and products. Unfortunately, there are many poorly produced medicinal mushroom products in the industry. It is important to know what you are purchasing, and to ask intelligent questions like - Is the product made from mushrooms or mycelium? Many lab-grown medicinal mushrooms is mycelium grown on grain. Analysis has shown that mycelium on grain has low levels of beta-glucans, undetectable levels of triterpenoids and very high levels of starch. Medicinal mushroom products that are mycelium grown on grain produce very minimal amounts of the important compounds that are in medicinal mushrooms. Teelixir only uses the fruiting bodies of organically cultivated medicinal mushrooms which are rigorously tested and guaranteed for active compounds.

Sourcing

We are dedicated to seeking out the world's cleanest, and highest grade herbal ingredients. We do not compromise our values to source only the most effective tonic herbal products. All of our medicinal mushrooms are sustainably wild-harvested, with respect to, and abiding by the fundamental concept of "Di Tao" sourcing in Chinese herbalism. Di Tao means "Earth Tao" or in Chinese, "authentic source." All of our herbal ingredients come directly from their original growing source, the pristine high mountain ranges, far from any cities or industrial pollution.

Many of our herbs are wildcrafted directly from the forest, and many are "semi wild." Semi-wild herbs are grown from seed, then placed into a natural environment (a mountain forest or a desert, for example) and allowed to grow naturally without human interference. The "semi-wild" cultivation process simulates the wild mushrooms growing conditions where the herb

can accumulate food and energy naturally. This method produces mushrooms with a chemical profile closely similar to the wild material and is often better than the organically cultivated varieties. Wild herbs cannot be termed "organic" because they are not cultivated, even though their growing methods would deem them certified organic.

Extraction

All our medicinal mushrooms are extracted using water only (unless stated otherwise) using the natural and clean water sources from the pristine mountain ranges where the mushrooms grow.

The exception is with our wild Chaga and Duanwood Reishi products. These mushrooms undergo a process of dual-extraction using water and organic ethanol. Organic ethanol is used to extract the adaptogenic terpenes while the hot water extracts the immune-modulating beta-glucans. This is to ensure that we extract the full-spectrum of the herbs medicine, both the water soluble and oil soluble constituents from the Chaga and Reishi mushroom. This process increases the bio-availability and produces a far greater nutritionally potent product.

Chemically Free and Non-GMO

All of our herbs are grown using organic cultivation methods, in pristine regions without the use of harmful chemicals, chemical fertilizers, or any form of genetic engineering. All of our raw herbal material is extracted using water only and contains NO fillers, excipients, additives or any other GMO derived nasty ingredients.

Non-irradiated

We guarantee that all our medicinal mushrooms and the herbal material we source enters into Australia in their purest form, in a completely non-irradiated state. The Australian importation regulations can be strict, but we have secured means by which we can ensure all the herbs from Teelixir have not been processed in any harmful ways that could damage the nutrition, or chemical profile of the herbal material. We wouldn't accept them any other way!

All of our medicinal mushrooms are sustainably wild-harvested, or organically ("semi-wild") cultivated, with respect to, and abiding by the fundamental concept of "Di Tao" sourcing in Chinese herbalism. This method produces mushrooms with a chemical profile closely similar to the wild material and is often better than the organically cultivated varieties.

What is wildcrafted?

Many of our tonic herbs are sustainably harvested directly from the wild environments in which they naturally grow in. Wild herbs cannot be termed "organic" because they are not cultivated, even though their growing methods would deem them certified organic.
