Product Application Instructions - Carlack Glass Compound

Carlack Glass Compound is used for cleaning glass surfaces and removing contaminants from the pores of the glass. Carlack Glass Compound is effectively cutting compound for glass. Designed with added materials to lubricate the glass as it cleans, therefore reducing swirling marks on the glass surface.

Carlack Glass Compound is effective in removing bug and bird contaminants, oils and road surface residues and other similar deposits from your glass surface.

Carlack Glass Compound can be used on any glass surface requiring cleaning. This product can be used as a stand-alone product and is complimented with Carlack Glass Finish to provide a long lasting protective barrier on your glass surface.

Step 1.

Apply a small amount of Carlack Glass Compound to a medium cloth and apply to the glass in medium overlapping circles. As the compound film on the glass reduces apply additional amounts of compound as required. Continue this action across the glass until all the glass is covered and the glass surface feels smooth below the cloth.

Step 2.

Allow Carlack Glass Compound to stand on the surface for 5 minutes before removing by hand using a soft cloth. Re-apply to heavily soiled glass areas as required. For improved glass protection and water repelling benefits it is recommended to apply Carlack Glass Finish.

The Carlack Car Care range also offers paint care and interior care products and other interior cleaning products including Carlack Leather Cream and Carlack Carisma Interior Fragrance.
