## Product Application Instructions - Carlack Glass Finish

Carlack Glass Finish is an excellent product for providing a protective coating on your glass surfaces. Designed to work with Carlack Glass Compound, this product gives your glass a slippery sealed finish to allow water to simply blow off while you are driving. Additionally, Carlack Glass Finish makes your glass easier to clean as bug and bird deposits can be simply wiped off with a damp cloth.

Carlack Glass Finish's unique protective barrier gives long lasting protection for your glass surfaces.

Carlack Glass Finish can be used on any glass surface requiring protection. This product can be used as a stand-alone product but is complimented with Carlack Glass Compound to provide clear vision and a long lasting protective barrier on your glass surface.

**Safety Notice:** While Carlack Glass Sealer provides a protective coating that allows water to simply blow off the glass surface as you drive, use of wipers is still recommended, as required to provide clear driving vision.

### **Step 1.**

Apply a small amount of Carlack Glass Finish to paper towel (kitchen towel or similar) and apply to a clean, dry glass surface in small overlapping circles. As the application film on the glass reduces apply additional amounts and continue covering the glass. Allow to stand for 2 minutes and repeat the application process. Allow to stand for 10 minutes. Be sure to apply to cool surfaces and not in direct sunlight

### **Step 2.**

Splash a small amount of water onto the glass surface and then remove, preferably with newspaper or a clean dry soft cloth. Continue wiping until the glass is streak free. Turn the newspaper or cloth as required to continue cleaning the glass

**Wash your hands with normal household soap after using this product.**

The Carlack Car Care range also offers paint care and interior care products and other interior cleaning products including Carlack Leather Cream and Carlack Carisma Interior Fragrance.
