Product Application Instructions - Carlack Insect Remover

Carlack Insect Remover has been formulated to remove bug and other deposits from your paintwork. Carlack Insect Remover is effective on all surfaces and has a fast working action to remove bugs and staining.

Carlack Insect Remover is safe for all painted surfaces.

Carlack Insect Remover can be used as a pre-wash cleaner for stubborn deposits or as a post wash cleaner for areas that did not clean effectively during the wash process.

Step 1.

Spray Carlack Insect Remover directly to the bug stains and contamination. Allow to sit for up to a minute as the product works to dissolve the bug deposits. Simply wipe off with a soft or Microfibre cloth.

Step 2.

After using Carlack Insect Remover it is recommended to spot polish or re-apply polish to the just cleaned surface. This will replace any polish that may have been removed by Carlack Insect Remover and protect surfaces that may have been affected by the insect deposits. For spot cleaning we recommend Carlack Fast Detailer and for cleaning and polishing Carlack Complete 68 polish.

The Carlack Car Care range also offers paint care and glass care products and interior cleaning products including Carlack Plastic Renew and Carlack Carisma Glass Clear.
