## Product Application Instructions - Carlack Longlife polish

**Step 1.** Wash and dry your vehicle. We recommend Carlack Car Shampoo to wash your vehicle. Ensure you follow local regulations regarding water usage and wash your car on a soft surface.

We recommend that polishes are applied with the vehicle in a shaded area. Applying polish in direct sunlight will not affect the finished results of the Carlack range; the polish tends to harden and therefore requires greater effort to remove.

**Step 2.** Evaluate the quality of the paint finish on your vehicle. Do this by wiping your fingers over the paint surface and feel for a rough finish on your paintwork. If the paint surface feels abrasive you may need to use a stronger (cutting) polish. We recommend using Carlack Cutting polish for this task. If cutting polish is not required follow the instructions below.

If Carlack Cutting polish is used we recommend using Carlack Complete polish before using the Carlack Longlife polish. Refer to the instructions for that product.

### Application:

Apply Carlack Longlife polish to a soft cotton cloth and apply to the paintwork of your vehicle. Be careful as the Carlack Longlife polish has a consistency close to water and flows from the bottle quickly. Cover one panel at a time using a wiping motion and cover the panel evenly. To ensure complete coverage of the panel a second coat can be applied after a few minutes. Allow Carlack Longlife polish to dry to a light haze (about 5 minutes) and then remove. If left for too long the effort to remove will increase.

### Removal:

Using a soft cotton cloth (flanalette or an old t-shirt) or microfibre cloth gently wipe over the applied areas in a circular motion frequently turning the removal cloth. Your result should be a smooth to the touch finish and a deep brilliant shine.

Carlack Longlife polish will give you a deep shine and an almost wet-look finish.

The Carlack Car Care range also offers glass and interior cleaners and protectors.
