Product Application Instructions - Carlack Plastic Renew

Carlack Plastic Renew is designed to nourish and preserve both interior and exterior plastic and vinyls and has a UV protectant to prevent drying and damage from the sun.

Carlack Plastic Renew is low fume and does not give of residues when exposed to sunlight.

Carlack Plastic Renew can also be used on rubber surfaces and adds a long lasting satin shine finish to tyres and exterior rubbers.

Step 1.

Clean the interior surfaces of your vehicle with a damp cloth. Allow to dry. For stubborn marks and contamination we recommend Carlack Prime Cleaner as a surface cleaner.

Step 2.

Either spray Carlack Plastic Renew directly to your plastic and vinyl surfaces and wipe over with a clean cloth or apply to a clean cloth and apply to the surfaces. Near windows and glass we recommend applying to the cloth first. This will reduce your workload by having to clean the glass and windows from any overspray.

Once applied, wipe Carlack Plastic Renew over all the surfaces you want treated and allow to absorb. Continue re-applying thin layers until a shine appears on the surface. Allow to dry for 5 minutes and then buff off with a clean cloth.

The Carlack Car Care range also offers paint care and glass care products and other interior cleaning products including Carlack Leather Cream and Carlack Carisma Interior Fragrance.
