Carlack Products Australia
Distributors of quality car care products

How do I tell if my paintwork needs polishing?

Step 1.

Wash and dry your vehicle. We recommend Carlack Car Shampoo to wash your vehicle. Ensure you follow local regulations regarding water usage and wash your car on a soft surface.

Step 2.

Evaluate the quality of the paint finish on your vehicle. Do this by wiping your fingers over the paint surface and feel the finish of your paintwork. If the paint surface feels abrasive you may need to use a stronger (cutting) polish to rejuvenate your paintwork. We recommend using Carlack Cutting Polish for this task. If your paint finish does not seem too abrasive Carlack Complete Polish would be best suited. Alternately, a clay bar or clay glove can be used to assist in preparing your paint surface.

Step 3.

Carlack Complete 68 polish can be used with or without your paintwork needing attention with cutting polish. Follow the instructions for use and service one panel at a time. Once completed, stand back and admire the shine.

The Carlack Car Care Range also includes Interior and Glass care products.
